

WHY YOU NEED THIRD-PARTY ARCHIVING WITH OFFICE 365

Think your email archiving problems are solved with Office 365? Think again...

1

Limited Archiving Support

Office 365 does not archive information from any other email platforms.

With MAX Mail you get fully platform-agnostic archiving.

2

No Direct Access To Your Data

With Office 365 your email data is stuck in the Microsoft cloud.

MAX Mail provides direct access to your data, independent of Microsoft's platform.

3

Index Latency

Office 365 requires an hour from upload to availability in search results.

With MAX Mail, indexing for inbound, outbound, and internal mail is near real-time.*

4

Lack of Protection

Office 365 does not protect items in the archive, so content can't be classified as original.

In MAX Mail's archive, all messages are read-only and tamperproof.

5

Limited Retention and Disposition Capability

Office 365 retention/disposition capabilities only include options to retain, delete, or archive based on email age and/or department.

MAX Mail provides much more granular policies.

6

Continued Costs for Inactive Users

If you wish to preserve inactive users in Office 365 you must continue to pay for those users.

MAX Mail does not charge for inactive users (subject to a fair use policy for storage).

7

No Single-Instance Storage (SIS)

With Office 365, multiple copies of the same message are archived in each recipient's mailbox.

MAX Mail supports SIS thus reducing the amount of storage space needed.

* The one exception is for a first-time bulk import of historical email uploaded via SFTP or the control panel, for which the import time depends on the quantity of data.
