

# Backup for Office 365 Exchange and OneDrive

A feature available with SolarWinds Backup

SolarWinds® Backup for Office 365® is designed to help you protect Microsoft® Office 365 users from data loss. Backup for Office 365 helps you retain and restore Exchange™ and OneDrive® data—and you can do it from the same web-based dashboard you use to protect servers, workstations, and critical business documents.

## PROTECT OFFICE 365 FROM THE SAME DASHBOARD AS SERVERS AND WORKSTATIONS

- » Save administrative time every day by checking status and managing backups in one place.
- » Improve backup management efficiency with at-a-glance status views and one-click drilldown reports.
- » Show backup status across customers and device and data types with a clean, web-based console.

## ARCHIVE AND RETAIN CUSTOMER DATA

- » Help customers meet retention and regulatory requirements with data storage in your choice of more than 30 worldwide data centers.
- » Retain and recover Office 365 Exchange data for up to seven years.
- » Retain and recover Office 365 OneDrive data for up to six months.

## RECOVER AS NEEDED, INDEPENDENT OF MICROSOFT SUPPORT

- » Equip yourself to respond to customer requests without reliance upon Microsoft support responsiveness.
- » Back up Office 365 Exchange every four hours.
- » Back up Office 365 OneDrive every six hours.

## EXTEND AND MODERNIZE YOUR DATA PROTECTION SERVICES OFFERING

- » Keep your data protection services up-to-date as your customers adopt Office 365.
- » Continue to add value as your customers' SaaS application usage evolves.
- » Don't lose customers to competitors that offer broader data protection services.

*Please note that Backup for Office 365 is currently available only in the standalone and N-central® integrated versions of SolarWinds Backup.*
