

# Endpoint Detection and Response:

A feature available with SolarWinds N-central

SolarWinds® Endpoint Detection and Response (EDR) helps MSPs prevent, detect, and respond to ever-changing threats—and recover quickly when ransomware or other exploits strike. Remediation and rollback can reverse the effects of an attack and restore endpoints to their pre-attack healthy state to minimize customer downtime. This feature is integrated into N-central®, so you can easily and quickly roll out and configure EDR, as well as respond to issues from a single dashboard.

## HELP PREVENT CYBERATTACKS

- » Protect against the latest threats without waiting for recurring scans or updates to definition signatures
- » Respond to endpoint threats in near real time
- » Enforce policy-driven protection tailored to your customer: allow/block USB and endpoint traffic to determine the appropriate response

## DETECT THREATS WITH BEHAVIORAL AI

- » Easily determine how and when an attack began
- » View summaries or detailed threat information from a single dashboard
- » Present key risk findings and executive insights via customized reports

## EASILY ROLLOUT AND CONFIGURE

- » Use rules to automate how EDR is deployed
- » Deploy EDR to Windows® and macOS® devices
- » Leverage PSA workflows to manage EDR alerts
- » Manage EDR licenses with the License Usage report
- » Operate from a single dashboard

## RESPOND EFFECTIVELY THROUGH AUTOMATION

- » Automate responses for quick threat containment
- » Remediate attacks by reversing the effects
- » Roll back attacks by replacing compromised files with pre-attack healthy versions
