

SolarWinds Mail Assure

Stay safe and in control of your email with email security built on collective intelligence

SolarWinds® Mail Assure cloud-based email security helps you **stay in control** and **protect** inbound and outbound email—using collective threat intelligence, 24/7 email continuity, and long-term email archiving.

Are you wasting time mitigating spam and malware? Do you have to constantly educate employees to think twice before opening that festive card or clicking on a potential malicious link that could be a phishing attack? SolarWinds® Mail Assure can help you manage it all at an affordable price.

Mail Assure is a cloud-based solution designed to provide inbound and outbound email security using collective threat intelligence, 24/7 email continuity, and long-term email archiving. Even if a business has a primary layer of security, as with Microsoft® Office 365®, our solution provides added control and an additional level of defense, built to protect against spam, viruses, malware, phishing, ransomware, and other email-borne threats.

MAIL ASSURE IS DESIGNED TO PROVIDE:

- » Protection & control for inbound and outbound email
- » Data-loss prevention and long-term data storage with email archiving
- » 24/7 built-in email continuity
- » Layered security for affordability and ease of use

Protection and control for inbound and outbound email

Destination routes: example1.com : 25

+ Add route

Region:

- Global (recommended)
- United States
- European Union
- United Kingdom
- Canada
- Australia

Layered security designed for affordability and ease of use

Benefits at a Glance

PROTECTION AND CONTROL FOR INBOUND AND OUTBOUND EMAIL

» **Defend against both known and emerging email-borne threats.**

Mail Assure’s in-house-developed technology cuts out the risk of a black-box situation where IT doesn’t fully control what is happening in the technology stack. The Mail Assure Intelligent Protection & Filtering Engine incorporates data from over two million domains under management, to help protect you from email-borne threats—with 2B+ spam messages blocked per month.

» **Reduce resources spent on managing email security**

Mail Assure is a cloud- and SMTP-based solution; this helps keep costs and maintenance low as there is no need for hardware (or ongoing maintenance). The setup is easy—simply add domains, change MX records, and let the solution do its job!

» **Gain visibility over your email flow**

Mail Assure’s multitenant web interface works right out of the box, with predefined settings, reporting, and views built for your technicians and end users, allowing for more control over your email. Quarantine management and email scout reports give technicians and users visibility over email flow, including options to release, remove, blacklist, block, or whitelist messages with preventive measures to minimize accidental blocking or releasing. Automated abuse reports indicate which users/accounts are sending out spam from your network, enabling your technicians to directly lock down abused accounts to help prevent IP blacklisting—and protect your company reputation.

Defend against both known and emerging email-borne threats

RETAIN AND EASILY ACCESS EMAIL COMMUNICATION

» **Engineered with 24/7 built-in email continuity**

14-day email queue support (if your primary email service is offline) is included by default. Mail Assure will attempt to continue delivering email and store emails in the incoming delivery queue for viewing. Web-based networking tools give you visibility into server downtime and outage issues, and our full fallback MX service helps ensure emails are delivered.

14-day email queue support (if your primary email service is offline) is included by default

RETAIN AND EASILY ACCESS EMAIL COMMUNICATION (CONT.)

» Help enhance business productivity

Email outages and downtime could cost you time and potential lost business. Mail Assure’s 24/7 email continuity gives users the ability to receive, send, and reply to email directly from the Mail Assure dashboard—or their mobile devices during outages or downtime.

» Keep a secure history of email communication

Robust encryption in transit (using TLS encryption) and at rest (using AES encryption) help keep your archive data secure.

LAYERED SECURITY DESIGNED FOR AFFORDABILITY AND EASE OF USE

» Gain robust protection for Microsoft® Office 365®, Exchange™ Online and G-suite™ users

Many email collaboration tools or other email offerings can lack the level of visibility and control you get with a professional email security solution. Mail Assure helps provide increased protection, visibility, and control against email threats and leverages a network of highly available global data centers to provide 24/7 email continuity in the case of Microsoft or Google® outages or downtime.

» Reduce data loss with long-term email archiving

Mail Assure’s robust encrypted email archiving includes journaling support to help users easily pull emails from existing Microsoft environments. The Mail Assure solution also includes advanced content and attachment-based search to help simplify finding and retrieving archived emails. Compressed storage for all inbound and outbound emails helps keep your data usage and costs low.

» Benefit from control over your email flow

The feature-rich GUI offers users authentication control and capabilities like LDAP and SSO. Regional data storage support gives IT managers the ability to select a specific region for storage of logs, quarantine, and archive data if needed for legal or compliance purposes.

Give users the ability to receive, send, and reply to email during outages or downtime

Robust protection for Microsoft® Office 365®, Exchange™ Online and G-suite™ users

Regional data storage support gives IT managers the ability to select a specific region for legal or compliance purposes

Product Feature Details

EMAIL SECURITY FOR INBOUND AND OUTBOUND EMAIL

- » **Protection via** our Intelligent Protection & Filtering Engine that incorporates data from our user base to help prevent known and emerging threats
- » **Easy setup** that lets you simply add domains and change MX records
- » **A multitenant web interface** with views built for both admins and end users
- » **Advanced log-search functionality** and email scout reports for greater visibility
- » **Quarantine management** to give users the power to view, release, remove, blacklist, block, or whitelist messages
- » **Advanced domain and filter settings management** for checks, permissions, and spam scoring thresholds
- » **Mailbox auto-detection** via SMTP or synchronization via LDAP to simplify getting started
- » **Whitelist and blacklist management** for added control
- » **Advanced filtering statistics**, such as number of spam messages filtered, viruses blocked, or total email volume
- » **Extension and attachment blocking management** (e.g., zip, rar, or PDF) to help protect against zero-day malware
- » **User and permission management** for transparency and control
- » **SSL/TLS traffic encryption** to assist in securely transmitting email when possible
- » **Granular configuration** per user/IP domain
- » **Smart host deployment for outbound email filtering** to block spam and viruses from leaving the organization and help protect IP reputation
- » **Optional DKIM signatures** to outgoing emails to help ensure sender authenticity and protect your sender reputation

BUILT-IN 24/7 EMAIL CONTINUITY

- » **14-day email queue support**—even if the primary service is offline for two weeks, Mail Assure will continue attempting to deliver email and store emails in the incoming delivery queue
- » **Web-based access** to archived emails and email quarantine even during an outage
- » **Ability to send and receive email** directly from the Mail Assure dashboard
- » **Immediate action** from Mail Assure during an outage so users can log in, receive, and send emails from the Mail Assure dashboard without delay
- » **Web-based networking tools** to help you diagnose issues
- » Visibility into server downtime and outages
- » **Accessible via mobile devices**, so users can send and receive email, even if they don't have their computer handy
- » **Full fallback MX service** included to help ensure emails are delivered
